

# Have you seen this Yellow Fish?

The Yellow Fish campaign is raising awareness of the pollution in our rivers\* and promoting ways we can all prevent it.

## How you can you and your business help:

- » Don't flush anything down toilets - even 'flushable' wipes cause damage
- » Keep absorbent materials such as sand, sawdust, kitchen towels etc. handy to clean up spillages
- » Use more ecological cleaning products and avoid those containing phosphates
- » Dispose of waste properly, using bins

**Most importantly, remember that 'only rain goes down the drain'**

\*Our rivers are polluted with chemical from detergents, heavy metals and oil from vehicles and litter disposed of poorly. Even products we wouldn't normally think of as harmful, such as milk, and fruit juices can pollute our rivers.

**Remember to look out for the yellow fish stencilled next to drains in your area!**
